**CHAPTER
ONE**

AWSAPICLI

A cli tool exposing capabilities of awsapilib like control tower account creation, account renaming and email updating, account termination and more.

- Documentation: <https://awsapicli.readthedocs.org/en/latest>

1.1 Project Features

- Creates an account through Control Tower. Supports nested OU by specifying a parent hierarchy up to 5 levels. It can create the OUs specified automatically if they don't exist with the usage of the force flag
- Requests password reset to activate the root account
- Resets the password of the root, activating the account providing the reset url from the request step.
- Activate IAM access to the billing console with the usage of the root password
- Can update the name and the email of the account
- Can activate and deactivate virtual MFA devices.

**CHAPTER
TWO**

INSTALLATION

At the command line:

```
$ pip install awsapicli
```

Or, if you have virtualenvwrapper installed:

```
$ mkvirtualenv awsapicli
$ pip install awsapicli
```

Or, if you are using pipenv:

```
$ pipenv install awsapicli
```

Or, if you are using pipx:

```
$ pipx install awsapicli
```

CHAPTER
THREE

USAGE

To use aws-account-lifecycle:

```
aws-account-lifecycle --help
Usage: aws-account-lifecycle [OPTIONS] COMMAND [ARGS]...

    Main entry point of the CLI.

Options:
    --help Show this message and exit.

Commands:
    billing-iam-activate      Activate IAM access to billing console on an...
    create                      Create a new account through Control Tower.
    mfa-activate                Activate virtual MFA on an account.
    mfa-deactivate              Deactivate virtual MFA on an account.
    request-password-reset     Request a password reset for an account.
    reset-password              Reset the password of an account.
    terminate                  Terminate (suspend for 90 days first) an account.
    update-email                Update the email of an account.
    update-name                Update the name of an account.
```

Activating IAM access on billing console

```
aws-account-lifecycle billing-iam-activate --help
Usage: aws-account-lifecycle billing-iam-activate [OPTIONS]

    Activate IAM access to billing console on an account.

Options:
    Logging options: [mutually_exclusive]
        Sets the level of logging interactively or
        accepts a configuration file.
    -l, --log-level [debug|info|warning|error]
        Provide the log level. Defaults to info.
        Mutually exclusive with providing a logging
        configuration file.
    -L, --log-config FILENAME   A config file for logging, mutually
                                exclusive with setting the logging level
                                interactively.
    -t, --2captcha-token TEXT  A valid token for the 2captcha service if
                                automatic captcha solving is required. Can
```

(continues on next page)

(continued from previous page)

	<code>read</code> from "TWO_CAPTCHA_API_TOKEN"
	environment variable
<code>-m, --mfa-seed TEXT</code>	The original mfa seed of the account if virtual MFA is enabled.
<code>-r, --region TEXT</code>	The home region of the account, can <code>read</code> from "AWS_DEFAULT_REGION" environment variable [required]
<code>-p, --password TEXT</code>	The root password of the account. [required]
<code>-e, --email TEXT</code>	The email to use. [required]
<code>--help</code>	Show this message and exit.

Creating an account

```
aws-account-lifecycle create --help
Usage: aws-account-lifecycle create [OPTIONS]
```

Create a new account through Control Tower.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
<code>-l, --log-level [debug info warning error]</code>	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
<code>-L, --log-config FILENAME</code>	A config file for logging, mutually exclusive with setting the logging level interactively.
<code>-e, --email TEXT</code>	The email to use. [required]
<code>-r, --region TEXT</code>	The home region of the account, can <code>read</code> from "AWS_DEFAULT_REGION" environment variable [required]
<code>-n, --name TEXT</code>	The name of the account. [required]
<code>-a, --arn TEXT</code>	The arn of the role that can access Control Tower. [required]
<code>-o, --organizational-unit TEXT</code>	The OU to create the account under. Defaults to "Custom". [required]
<code>-h, --parent-hierarchy TEXT</code>	The parent hierarchy of the OU if any, space delimited. If you want the OU to be created under Root/GrandParentOU/ParentOU the arguments would be ` -h Root -h GrandParentOU -h ParentOU`
<code>-p, --product-name TEXT</code>	The product name of the account. Defaults to the account name if not set.
<code>-se, --sso-email TEXT</code>	The email for an SSO user. It defaults to the account email if not set.
<code>-sf, --sso-first-name TEXT</code>	The first name for an SSO user. It defaults to "Control".
<code>-sl, --sso-last-name TEXT</code>	The last name for an SSO user. It defaults to "Tower".

(continues on next page)

(continued from previous page)

-f, --force-ou-hierarchy-creation	If <code>set</code> and a parent hierarchy is provided <code>then then</code> the tool will try to create it even <code>if</code> it does not exist.
--help	Show this message and exit.

Activating MFA

```
aws-account-lifecycle mfa-activate --help
Usage: aws-account-lifecycle mfa-activate [OPTIONS]
```

Activate virtual MFA on an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file <code>for</code> logging, mutually exclusive with setting the logging level interactively.
-t, --2captcha-token TEXT	A valid token <code>for</code> the 2captcha service <code>if</code> automatic captcha solving is required. Can <code>read</code> from " <code>TWO_CAPTCHA_API_TOKEN</code> " environment variable
-m, --mfa-seed TEXT	The original mfa seed of the account <code>if</code> virtual MFA is enabled.
-r, --region TEXT	The home region of the account, can <code>read</code> from " <code>AWS_DEFAULT_REGION</code> " environment variable [required]
-p, --password TEXT	The root password of the account. [required]
-e, --email TEXT	The email to use. [required]
-d, --device-name TEXT	The name of the virtual device. Defaults to " <code>root-account-mfa-device</code> " [required]
--help	Show this message and exit.

Deactivating MFA

```
aws-account-lifecycle mfa-deactivate --help
Usage: aws-account-lifecycle mfa-deactivate [OPTIONS]
```

Deactivate virtual MFA on an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	

(continues on next page)

(continued from previous page)

	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file for logging, mutually exclusive with setting the logging level interactively.
-t, --2captcha-token TEXT	A valid token for the 2captcha service if automatic captcha solving is required. Can read from "TWO_CAPTCHA_API_TOKEN" environment variable
-m, --mfa-seed TEXT	The original mfa seed of the account if virtual MFA is enabled.
-r, --region TEXT	The home region of the account, can read from "AWS_DEFAULT_REGION" environment variable [required]
-p, --password TEXT	The root password of the account. [required]
-e, --email TEXT	The email to use. [required]
-d, --device-serial TEXT	The serial of the virtual device in the form of arn:aws:iam::ACCOUNTID:mfa/DEVICE_NAME. [required]
--help	Show this message and exit.

Request a password reset

```
aws-account-lifecycle request-password-reset --help
Usage: aws-account-lifecycle request-password-reset [OPTIONS]
```

Request a password reset **for** an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file for logging, mutually exclusive with setting the logging level interactively.
-e, --email TEXT	The email to use. [required]
-t, --2captcha-token TEXT	A valid token for the 2captcha service if automatic captcha solving is required. Can read from "TWO_CAPTCHA_API_TOKEN" environment variable
--help	Show this message and exit.

Reset password

```
aws-account-lifecycle reset-password --help
Usage: aws-account-lifecycle reset-password [OPTIONS]
```

(continues on next page)

(continued from previous page)

Reset the password of an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file for logging, mutually exclusive with setting the logging level interactively.
-r, --reset-url TEXT	[required]
-p, --password TEXT	The root password of the account. [required]
--help	Show this message and exit.

Terminate an account

```
aws-account-lifecycle terminate --help
Usage: aws-account-lifecycle terminate [OPTIONS]
```

Terminate (**suspend for 90** days first) an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file for logging, mutually exclusive with setting the logging level interactively.
-t, --2captcha-token TEXT	A valid token for the 2captcha service if automatic captcha solving is required. Can read from " TWO_CAPTCHA_API_TOKEN " environment variable
-m, --mfa-seed TEXT	The original mfa seed of the account if virtual MFA is enabled.
-r, --region TEXT	The home region of the account, can read from " AWS_DEFAULT_REGION " environment variable [required]
-p, --password TEXT	The root password of the account. [required]
-e, --email TEXT	The email to use. [required]
--help	Show this message and exit.

Update an account email

```
aws-account-lifecycle update-email --help
Usage: aws-account-lifecycle update-email [OPTIONS]
```

Update the email of an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file for logging, mutually exclusive with setting the logging level interactively.
-t, --2captcha-token TEXT	A valid token for the 2captcha service if automatic captcha solving is required. Can read from " <code>TWO_CAPTCHA_API_TOKEN</code> " environment variable
-m, --mfa-seed TEXT	The original mfa seed of the account if virtual MFA is enabled.
-r, --region TEXT	The home region of the account, can read from " <code>AWS_DEFAULT_REGION</code> " environment variable [required]
-p, --password TEXT	The root password of the account. [required]
-e, --email TEXT	The email to use. [required]
-n, --new-email TEXT	The email to update to. [required]
--help	Show this message and exit.

Update an account name

```
aws-account-lifecycle update-name --help
Usage: aws-account-lifecycle update-name [OPTIONS]
```

Update the name of an account.

Options:

Logging options: [mutually_exclusive]	Sets the level of logging interactively or accepts a configuration file.
-l, --log-level [debug info warning error]	Provide the log level. Defaults to info. Mutually exclusive with providing a logging configuration file.
-L, --log-config FILENAME	A config file for logging, mutually exclusive with setting the logging level interactively.
-t, --2captcha-token TEXT	A valid token for the 2captcha service if automatic captcha solving is required. Can read from " <code>TWO_CAPTCHA_API_TOKEN</code> " environment variable

(continues on next page)

(continued from previous page)

-m, --mfa-seed TEXT	The original mfa seed of the account if virtual MFA is enabled.
-r, --region TEXT	The home region of the account, can read from " AWS_DEFAULT_REGION " environment variable [required]
-p, --password TEXT	The root password of the account. [required]
-e, --email TEXT	The email to use. [required]
-n, --name TEXT	The name of the account. [required]
--help	Show this message and exit.

CONTRIBUTING

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

4.1 Submit Feedback

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.

4.1.1 Get Started!

Ready to contribute? Here's how to set up *awsapicli* for local development. Using of pipenv is highly recommended.

1. Clone your fork locally:

```
$ git clone https://github.com/schubergphilis/awsapicli.git
```

2. Install your local copy into a virtualenv. Assuming you have pipenv installed, this is how you set up your clone for local development:

```
$ cd awsapicli/  
$ pipenv install --ignore-pipfile
```

3. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally. Do your development while using the CI capabilities and making sure the code passes lint, test, build and document stages.

4. Commit your changes and push your branch to the server:

```
$ git add .  
$ git commit -m "Your detailed description of your changes."  
$ git push origin name-of-your-bugfix-or-feature
```

5. Submit a merge request

AWSAPICLI

5.1 awsapicli package

5.1.1 Submodules

5.1.2 awsapicli.actions module

actions package.

Import all parts from actions here

`awsapicli.actions.activate_iam_billing(options, console)`

Activates IAM access to the billing console.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

`awsapicli.actions.activate_mfa(options, console)`

Activates virtual MFA on an account.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns The device representation returned by the activation process.

Return type device (VirtualMFADevice)

`awsapicli.actions.deactivate_mfa(options, console)`

Deactivates the virtual MFA of an account.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

`awsapicli.actions.get_account_manager_arguments(options)`

Prepares the standard arguments for account manager actions.

`awsapicli.actions.get_password_manager_arguments(options)`

Prepares the standard arguments for password manager actions.

`awsapicli.actions.password_reset(options, console)`

Resets an account root password.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

`awsapicli.actions.password_reset_request(options, console)`

Requests a password reset link.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

`awsapicli.actions.show_header()`

Shows the project header.

`awsapicli.actions.terminate_account(options, console)`

Terminates an account.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

`awsapicli.actions.update_account_email(options, console)`

Update an account's email.

Parameters

- **options** – The options provided by click
- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

`awsapicli.actions.update_account_name(options, console)`

Update an account's name.

Parameters

- **options** – The options provided by click

- **console** – The console provided by rich

Returns True os success False on failure

Return type result (bool)

5.1.3 awsapicli.awsapicli module

Main code for awsapicli.

`awsapicli.awsapicli.filter_set_options(options)`

Filters out options that are not set.

`awsapicli.awsapicli.setup_logging(options)`

Sets up the logging.

Needs the args to get the log level supplied

Parameters `options` – The options provided through the cli.

5.1.4 awsapicli.awsapicliexceptions module

Custom exception code for awsapicli.

5.1.5 awsapicli.options module

options package.

Import all parts from options here

`awsapicli.options.common_account_manager_options(function)`

Options common to account manager commands.

`awsapicli.options.common_options(function)`

Options common to all commands.

5.1.6 awsapicli.validators module

validation package.

Import all parts from validation here

`awsapicli.validators.generate_random_string(length)`

Generates a random string according to the length provided.

`awsapicli.validators.get_random_account_email(account_email)`

Generates a random email up to the maximum size allowed.

`awsapicli.validators.get_random_account_name(account_name)`

Generates a random name up to the maximum size allowed.

`awsapicli.validators.validate_account_name(ctx, param, value)`

Validates an account name.

`awsapicli.validators.validate_account_password(ctx, param, value)`

Validates an account password.

`awsapicli.validators.validate_arn(ctx, param, value)`

Validates an AWS ARN option.

`awsapicli.validators.validate_email(ctx, param, value)`

Validates an email option.

`awsapicli.validators.validate_mfa_device_name(ctx, param, value)`

Validates a virtual MFA device name.

`awsapicli.validators.validate_mfa_device_serial(ctx, param, value)`

Validates a reset link.

`awsapicli.validators.validate_region(ctx, param, value)`

Validates a AWS region option.

`awsapicli.validators.validate_reset_link(ctx, param, value)`

Validates a reset link.

`awsapicli.validators.validate_token(ctx, param, value)`

Validates a 2Captcha Token option and inserts an active 2Captcha instance in the options.

5.1.7 Module contents

awsapicli package.

Import all parts from awsapicli here

**CHAPTER
SIX**

CREDITS

6.1 Development Lead

- Costas Tyfoxylos <ctyfoxylos@schubergphilis.com>

6.2 Contributors

None yet. Why not be the first?

**CHAPTER
SEVEN**

HISTORY

**CHAPTER
EIGHT**

0.0.1 (24-12-2021)

- First code creation

**CHAPTER
NINE**

0.1.0 (29-12-2021)

- Initial release

**CHAPTER
TEN**

0.1.1 (29-12-2021)

- Disabled Iterm solver since the rendering does not work with the rich framework.

CHAPTER
ELEVEN

0.1.2 (29-12-2021)

- Linted code.

CHAPTER
TWELVE

0.1.3 (29-12-2021)

- Bumped dependencies for a fix on account creation.

CHAPTER
THIRTEEN

0.1.4 (30-12-2021)

- Bumped dependencies and fixed typo.

CHAPTER
FOURTEEN

0.1.5 (26-04-2022)

- Updated dependencies.

CHAPTER
FIFTEEN

0.1.6 (06-05-2022)

- Fixed IAM login workflow in dependency.

CHAPTER
SIXTEEN
